FIREWEBSERVER

Visualization and command tool for Comfort panels
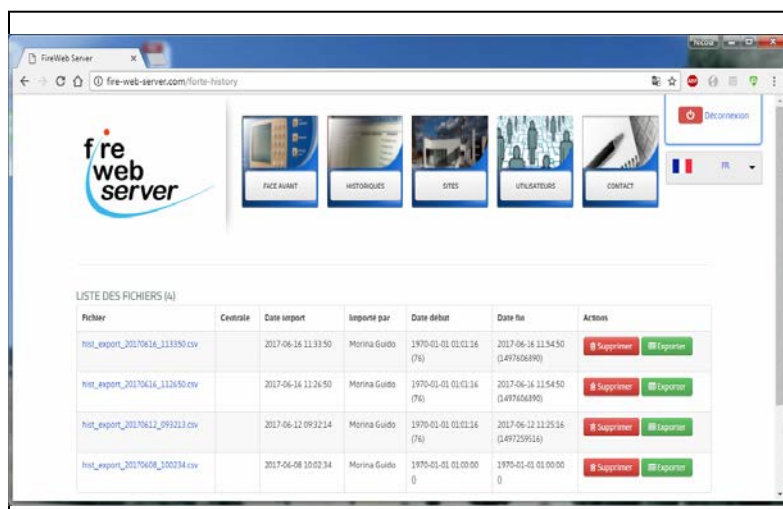

FireWebServer *is a tool allowing our customers the visualization and command of the Hephais 1600 Comfort panels installed all around the world.*

Through the TCP/IP address it will be possible to access the panel, view and operate exactly like we were in front of it.
Every customer has its own web page with company data, panels data, addresses and licenses.
A list of panels will appear after the login page and it will be possible to choose the one we want to view.
The client is also allowed to save from remote location the memory event log.

Main characteristics

- Personal page with data saved
- Illimitate number of panels manageable
- Possibility to save the memory events from remote
- Possibility to operate directly on the panels from remote
- Possibility to add users from the personal page
